# We Speak Your Language... In Any Language

## REACHING YOUR GLOBAL AUDIENCE

An organization's technical materials – from software documentation to websites to information brochures – influence the reader's perception of the organization, and subsequently, the quality of its products and services. As a result, it is not sufficient to translate word for word. Each piece of material must be localized in a way that elicits the same reaction in the target languages as was intended in its original language. MultiLing makes this possible with highly specialized translators who intimately know the technical nature of both your subject matter and the language – and specific nuances – of their native country.

## MEETING HIGHLY TECHNICAL DEMANDS

MultiLing translates highly technical materials in the world's most demanding industries, including information technology (IT), chemicals, medical technology, energy, biotechnology, and automotive. In fact, for more than 25 years, MultiLing has translated hundreds of millions of words into more than 100 language combinations for Fortune 500 companies such as Dell and LSI – and can translate into and from any language you require.

MultiLing's highly specialized translators leverage MultiLing's advanced technology, terminology management, and unique streamlined processes to quickly and cost-effectively create quality translations across a broad range of subjects.

LET'S DISCUSS YOUR NEEDS

TRANSLATORS OF THE WORLD'S MOST IMPORTANT IP DOCUMENTS

## DRIVING QUALITY

MultiLing is a leader of innovation and industry best practices, and is an active driver of translation industry standards, such as Linport and SAE J2450. Our exceptional quality control processes also meet or exceed the requirements of the translation industry's leading standard organizations and certifications, including:

- EN15038 Certification
- SAE J2450 Translation Quality Metric Task Force
- LISA Metric & ATA Metric
- ISO 9001:2008 Certification
- MultiLing's QA Evaluator (US PATENT 7653531)

MultiLing is a member of the American Translation Association (ATA) and Globalization & Localization Association (GALA), and participates in standards discussions such as TMX and TBX.

## HAVING A STREAMLINED PROCESS MEANS MULTILING CAN OFFER YOU THE BENEFIT OF:

- ▣ Specialized in-country teams
- ▣ Terminology management
- ▣ Quality controls
- ▣ Advanced technology

# Streamlining the Technical Translation Process

With MultiLing, your translations are handled by dedicated project managers, linguistic teams with scientific knowledge matching your subject matter, and advanced technologies. This cross-team collaboration leads to lower costs for you, fewer translation errors, and increased efficiency.

Our in-house teams manage the entire translation process, from assigning resources that best fit your project to several quality control steps to ensure the translation is complete and ready for publication.
